

Network Design

Need a new network set-up? Thinking of Restructuring? Moving premises?

Let ACEIT make the most of your infrastructure by designing the most cost effective network structure to meet your requirements. Whether you are purchasing and using all new equipment, using your existing infrastructure or looking to purchase new components to enhance what you already have, we have the experience to design and set up your network.

If your network isn't set up correctly it won't be as effective as it should be. Slow networks may compromise your productivity and cost you money.

Our network engineers can come out and audit your current infrastructure and advise what changes need to be made to make your network run more efficiently e.g. faster network cards/switches, better internet connections etc. These changes would mean greater bandwidth on the network.
